Experience

Applied Scientist & Applied Research Intern

Thomson Reuters

London, UK

June 2025 – Present

- Initially hired as a 4-month intern; extended twice to 18 months based on performance to take on full-time Applied Scientist responsibilities.
- Building tool-augmented multi-agent systems for cross-document risk assessment and extraction over high-stakes legal documents, supporting due diligence in M&A transactions.
- Designed an adversarial multi-agent evaluation pipeline that reverse-engineered expert grading criteria from audit sheets, achieving 90%+ failure detection with 0.88 Pearson correlation to expert grades to reducing the evaluation feedback loop from days to hours and enabling rapid iteration on solution development.
- Fine-tuned LLMs for specialized legal use cases including long-form contract drafting, customization, and summarization.

LLM Data Integrity Specialist

Outlier AI

Nottingham, UK

May 2024 – May 2025

- Improved tool usage and function-calling capabilities of advanced reasoning LLMs through RLHF training pipelines, enabling models to infer, chain, and autonomously execute multi-step complex actions from high-level user intent, powering AI solutions for tech firms including Google and Meta.
- Curated and cleaned training datasets in collaboration with domain experts, achieving a 20% improvement in instruction adherence.

Data Scientist Intern

Department of Neuroscience, University of Nottingham Malaysia

Selangor, Malaysia

June 2021 – Aug 2023

- Engineered feature extraction pipelines to transform raw EEG and eye-tracking clinical data into structured features: coherence, Hjorth parameters, and spectral power bands for EEG; gaze patterns and fixation analysis for eye-tracking.
- Trained predictive models for neurological and mental health disorder diagnosis, achieving 80% accuracy for Parkinson's and 82% for Schizophrenia from EEG signals, and 92% for Autism from eye-tracking data.

Education

University of Nottingham

MSc Artificial Intelligence - *Grade: Distinction*

BSc Computer Science (*Hons*)

Nottingham, UK

Sept 2023 – Dec 2024

Sept 2020 – Aug 2023

Key Modules: Machine Learning, Computer Vision, Natural Language Processing, Big Data, Information Visualisation

Key Projects

Sherlock-AI: Character Emulation with LLMs

Hugging Face Transformers, LoRA, Flask

[Repo](#) 

- Designed a resource-efficient, transferable character emulation pipeline: fine-tuned a quantized LLaMA model with *LoRA* for Sherlock Holmes emulation, automating dialogue extraction from public domain texts and deploying on *RunPod*.
- Created a web chat application for Sherlock role-play, integrating the fine-tuned model and external language models via *OpenRouter* with text-to-speech, character customizability and PostgreSQL-based chat management.
- In A/B testing, 72.4% of users favoured fine-tuned model over baseline for authenticity, with perfect usability scores.

CourseCompanion: RAG-Powered Course Assistant

[Repo](#) 

- Developed a scalable educational platform enabling professors to create AI teaching assistants that auto-generate knowledge bases from course materials, featuring chat interfaces, FAQ system, and management dashboards; built with Flask and PostgreSQL using RAG with LangChain and Flair for context-aware responses, deployed on DigitalOcean with Google Drive integration.

DeepGaze: Autism Diagnosis with ML and Webcam Eye-Tracking

[Demo Video](#)  [Repo](#) 

- Designed approaches for early autism detection from eye-tracking data visualized as images, combining PCA with sklearn classifiers and a custom Keras CNN with transfer learning to achieve 92% accuracy; built a modular Flask web app for webcam-based data collection, visualization, prediction, and model retraining.

Publication

Mehmood, M., Amin, H. U. (2024). Pre-diagnosis for Autism Spectrum Disorder Using Eye-Tracking and Machine Learning Techniques. *Advances in Brain Inspired Cognitive Systems*, Springer Nature Singapore. 

Technical Skills

Programming Languages: Python, C, Java, JavaScript, R, Haskell, SQL, MATLAB, HTML/CSS

Libraries & Frameworks: TensorFlow, PyTorch, Hugging Face (Transformers, trl), scikit-learn, LangChain, NLTK, spaCy, Pydantic AI, OpenCV, Flask, REST APIs, matplotlib, seaborn, plotly, D3.js, Claude Agent SDK

Tools & Platforms: Git (GitHub, GitLab CI), Docker, AWS (SageMaker, EC2, Lambda, Bedrock), Apache Spark/Databricks, PostgreSQL, Runpod, DigitalOcean, Power Bi, Claude Code, Cursor
